

Application Serial No. 09/915,159  
Amendment After Final Dated December 11, 2003

**In the Specification:**

Please replace the paragraph beginning at Page 7 line 25 and bridging to Page 8 line 4 with the following:

(Amended) The mechanical indicator portion 44 of the assembly includes an indicator button 60 closely and slideably received within chamber 52 of body 41. Preferably, button 60 has an outer, somewhat cylindrical configuration, which closely matches the inside configuration of body 41. The upper end 64 of button 60 can include fins 83 (see Figure [4] 5) which are received within and guide the button within cap 80. The finned upper end 64 of button 60 can be colored to facilitate readily ascertaining the position of the button through the cap.
